DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 5, 9 and 10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 5, words “preferably” on line 5 and 9 should not be recited in the claim.

Claim 9 depends on itself.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various

Art Unit: 1764

claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brookhart, III et al (6,103,946) in view of Bearden, Jr. et al (3,574,782).

Brookhart discloses a process for production of alpha-olefin by oligomerizing ethylene by using a catalyst substantially the same as the claimed process (see the abstract; col. 1, line 64 thru col. 9, line 10; col. 15, lines 21-42).

Brookhart appears to be silent using a plug-flow reactor for the reaction (see entire patent for details). However, Bearden discloses a similar process being operated in a plug-flow reactor (the abstract; col. 4, lines 40-45).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the Brookhart process by operating the oligomerization in a plug flow reactor since Bearden discloses that high product purity and high concentration are achieved most easily in batch reactions or in continuous systems operating under essentially plug flow (col. 4, lines 41-45).

Once a plug flow reactor is obviously selected for the Brookhart process, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified Brookhart process by selecting locations along the reactor tube for adding the catalyst according to the rate of consumed catalyst along the length of the tube to optimize the process.
